

MODULAR, PORTABLE, BOTTOMLESS PLANTER

ABSTRACT OF THE DISCLOSURE

A modular, bottomless planter comprising a plurality of panels and at least one temporary fastener that is adapted for temporarily attaching at least one of the panels to another of the panels. The planter is configured to be temporarily assembled around the base of a stationary object, such as a mailbox post or tent stake, and filled with plants or other vegetation to produce a pleasing visual effect. In one embodiment of the invention, the planter includes four substantially planar panels that are configured to be stacked when the planter is in a disassembled configuration.
